Bilateral Meetings

- (9:00 a.m. - 3:00 p.m)

Description

ABM Space sp. z o.o. focuses on mobile robotics and development of instruments for exploration of space and Earth's environments. The company commercializes solutions from the area of exploration robotics and non-invasive subsurface and underground object mapping. It develops control software and algorithms for navigation and positioning. ABM's technologies from the field of orbital robotics, docking and landing will find applications in space and on Earth. The company actively animates Polish student Mars rover community of URC and ERC competitions and offers space education programs.
